

eftsure supports Australian businesses to safeguard payments from fraud and error by matching ABN and business names with a bank account and BSB numbers.

Get paid faster

Make it easy and secure to be paid by your customer. When you've verified your details once, all eftsure customers will be able to onboard you more efficiently for faster payments.

Impress future customers

By verifying your details, you show potential clients that you are helping them solving cybercrime. Businesses benefit from a secure community to keep payments from being defrauded.

Frequently asked questions about getting paid via eftsure

Why am I being asked to verify my details?

Banks don't match BSBs and Account Numbers to Account Names when making payments.

Cybercriminals often intercept emails between suppliers and their customers (or just email customers directly) and claim the bank details for the supplier have changed (or change it on legitimate invoices). This is often done without your knowledge. As a result, it is possible for hackers, fraudsters or malicious insiders to change the bank details your customers have on file for you to their own, and route payments intended for you to themselves.

In order to protect your revenue, Australian businesses use eftsure software to validate all their suppliers' bank account details to ensure the details they have on file for you are correct.

This one-off verification ensures that payments made to your organisation indeed reach your bank account verified by eftsure.

Why did I receive an email from eftsure and my customer?

Your customer has authorised eftsure to perform a supplier verification on their behalf. This process reaches out to all of your customer's suppliers, is a procedural request, and is not related to a specific invoice or payment. Should you wish to further validate the legitimacy of this request, contact the account department of your customer directly.

Why do I have to verify my details?

Cybercriminals often intercept emails between suppliers and their customers (or just email customers directly) and claim the bank details for the supplier have changed (or change it on legitimate invoices). This is often done without the Supplier's knowledge.

Banks don't match Payee Names with BSB and Account Numbers. Sometimes, bank account and BSB numbers can be entered incorrectly, or worse being changed by cybercriminals. This results in delayed, lost or stolen payments.

By verifying your details with eftsure, your customers are being assured your details are correct. This allows them to pay you the right amount.

Is there any cost to me to be verified?

No - There is no charge for suppliers to be verified by eftsure.
